

**In the Claims**

This listing of the claims replaces all prior versions, and listings of claims in the application.

**Listing of Claims:**

1. (Currently Amended) A plasma display panel for a multi-screen, comprising:  
a plurality of unit plasma display panels wherein a front panel whereon [[a]] one or more sustain electrodes and [[a]] one or more scan electrodes are formed is sealed with a rear panel whereon an address electrode is formed,  
~~wherein end portions of the sustain electrodes located opposite to receive scan signals in the scan electrode form a common electrode, and~~  
wherein end portions of the sustain electrodes form a common electrode,  
wherein the end portions of the sustain electrodes are located opposite to an edge of the scan electrodes,  
wherein the scan electrodes receive the scan signals through the edge of the scan electrodes, and  
wherein the sustain electrode is configured to receive the sustain signal from the common electrode.
2. (Cancelled)
3. (Previously Presented) The panel according to claim 1, wherein the common electrode is formed on a sidewall of the front panel located in a place adjacent to different plasma display panels.
4. (Currently Amended) A plasma display panel for a multi-screen, comprising:  
a plurality of unit plasma display panels wherein a front panel whereon a sustain electrode and a scan electrode are formed is sealed with a rear panel whereon an address electrode is formed,  
wherein both ends of the sustain electrodes are connected in common to a first common electrode and a second common electrode, and

wherein a sustain signal is simultaneously applied to both ends of the sustain electrodes from the first common electrode and the second common electrode.

5. (Currently Amended) The panel according to claim 4, further comprising a third common electrode connected to one of the first common electrode and the second common electrode in an opposite position where a scan signal is applied to the scan electrode, and extended to the position whereto the scan signal is applied.

6. (Currently Amended) The panel according to claim 4, further comprising a third common electrode for connecting the first common electrode and the second common electrode each other.

7. (Previously Presented) The panel according to claim 5, wherein the third common electrode is formed to have a broader width than that of the sustain electrode and to have a low impedance.

8. (Previously Presented) The panel according to claim 6, wherein the third common electrode is formed to have a broader width than that of the sustain electrode and to have a low impedance.

9. (Cancelled)
